

# ALERTLINK FOR G7C AND EXO

COMING SOON

## HARNESS RAPID COMMUNICATION DURING INCIDENTS

AlertLink proximity-based warning alerts are an innovative new safety communication feature designed to enhance the emergency response capabilities of Blackline's personal and area monitoring devices.

AlertLink works by providing real-time alerts to nearby active devices during high urgency events—high-gas, no-motion, falls, SOS, and overlimit. The result? Expedited field level response for at risk workers, streamlined evacuations, and a more robust fence line gas monitoring network.

## KEY BENEFITS

### Interconnected Fence Line Network

AlertLink enables the sharing of high gas alerts from one EXO area gas monitor to other nearby connected devices on the fence line. Featuring a custom radius range between 30 m (100 ft) to 5000 m (16,000 ft), this seamless, interconnected system means if one EXO issues an alert, others within the proximity radius also activate alarms, ensuring all nearby workers stay safe.

### Streamlined Evacuations

EXOs share alarms with nearby area monitors, and workers receive immediate notification on their G7 devices about the EXO alarm, facilitating faster evacuations when needed. That's because additional steps, like sending out a group text message or contacting workers directly on the need to evacuate, can be eliminated.

### Faster Responses in the Field

If an employee is working away from others and has an incident, anything from a health event to a bad fall, it may be most efficient for the worker closest to them to investigate and respond. AlertLink delivers real-time proximity-based alerts to nearby devices, including comprehensive alert details for a more efficient and informed response.

### Effortless Setup

AlertLink can be activated on your existing and new G7C, and EXO devices via an over the air firmware update and a single click on Blackline Live. No additional software required!
